Responsibility for generations

The Hörmann family business has over 85 years of experience as a construction component specialist. This gives us an obligation to both current and future generations. That's why environmental responsibility plays such an important role for us. With this in mind, we develop innovative solutions for sustainable products and intelligent environmental protection.

“A GOOD REPUTATION MUST BE EARNED.”

August Hörmann

In keeping with the tradition started by the company's founder, the Hörmann brand is a true promise of quality and is one of Europe's most successful suppliers in the area of entrance doors. Due to the comprehensive international sales and service network, Hörmann is your strong partner for high-quality construction components.

AN EYE ON THE FUTURE. Hörmann is setting a good example. That's why 100% of our electricity needs in Germany come from green electricity. Together with an intelligent and certified energy management system, CO₂-neutral mailing and the recycling of valuable materials, more than 60000 tons of CO₂ are saved each year. In addition, we offset over 100000 tonnes of CO₂ by promoting wind energy and reforestation projects in cooperation with ClimatePartner.

You can find further information at
www.hormann.co.uk/company/environment

Brand quality

The family-owned company Hörmann offers all important construction components for building and renovating projects from a single source. We manufacture in highly specialised factories using state-of-the-art production technologies. Our employees work intensively on new products, continual further developments and improvements to details. The results are patents and unique products on the market.

LONG-LASTING. GUARANTEED. All doors are developed and manufactured by Hörmann. Endurance tests under real conditions ensure mature series products with Hörmann quality.

QUALITY THAT IMPRESSES. The perfect symbiosis of steel and glass: Made from high-quality steel profiles and large glazings made from 6 mm laminated safety glass, Hörmann steel loft doors are true masterpieces of craftsmanship. Thanks to the material quality and Hörmann's uncompromising quality assurance, with Hörmann you are choosing doors that you can enjoy for years to come.

QUALITY SHOWS TRUE GREATNESS. Our loft doors are available as single- or double-leaf hinged doors or sliding doors in door set sizes up to 5000 mm wide and 4000 mm high. This allows you to adapt the doors to your own living spaces and requirements – from doors in small passages to large glass elements. You can also combine these flexibly with matching side elements and transom lights.

Sliding doors and hinged doors also impress when paired with a harmonious overall appearance.

Timeless design

Light-flooded rooms with modern elements: The design of Hörmann steel loft doors is inspired by the expressive minimalism of the industrial style. The timeless classics can be combined with a range of interior styles and are ideally suited for both living and work spaces. This will give your home a minimalist and expressive interior.

MAXIMUM TRANSPARENCY. With the loft doors, you can ideally structure and separate living areas from each other – and still enjoy the natural light and maximum transparency. The large glass and steel surfaces create bright, light-flooded rooms and harmonious transitions, for example, between the living area and the kitchen.

NARROW VIEW. The doors look particularly elegant due to the narrow profile view of only 76 mm or 20 mm for the fixed glazing. The filigree, surface-mounted rails also support the elegant overall appearance of the loft doors.

→ For further information, see from page 18.

TOP. Double-leaf hinged doors

Customised equipment

From the lever handle sets and bar handles to the colour: your Hörmann steel loft doors are manufactured to perfectly fit your needs and requirements. Choose between different equipment options to correspond to your personal taste. Loft doors enrich any living or work space with their modern look.

5 preferred colours
or RAL to choose

COLOUR. In addition to the standard version in Jet black matt RAL 9005, you can choose between five other preferred colours. Can't find the colour you are looking for? Then choose from many RAL colours, NCS special colours or texture and effect colours.

→ For further information, see from page 21.

PUSH BARS AND LEVER HANDLE SETS. The industrial style of Hörmann loft doors can be perfectly completed with the matching handle or lever handle. Choose from ten lever handle sets, in Jet black RAL 9005 or stainless steel on request, as well as eleven high-quality push-bars.

→ For further information, see from page 22.

GLAZING BEADS. You can optionally equip the doors with the Slim glazing bead or the angled glazing beads. The filigree steel profile gives the design a modern line and adds to this overall elegant effect.

→ For further information, see from page 20.

Lever handle sets are also designed without a rose escutcheon to emphasise the minimalist design.

The optional angled glazing bead emphasises the industrial style with visible screw fittings.

LEFT. Push bar HIL G-12

HINGED DOORS. The classic variant: hinged doors are anchored in the door frame with hinges and can be opened inwards or outwards. The ideal solution for a stylish sense of space with that certain something extra. Hinged doors are available as single- or double-leaf doors.

→ For further information, see from page 18.

BOTTOM RIGHT. Single-leaf hinged door with push bar HL G-11, side elements and transom light as well as fixed element

RIGHT. Double-leaf door sliding door with side elements
BOTTOM. Double-leaf door sliding door with side elements

SLIDING DOORS. A steel loft door as a sliding door is the perfect solution for the transition between the kitchen and the dining area: with the sliding door, the rooms can be effortlessly separated when cooking, for example, and then reconnected to form an open-plan kitchen-living area. You can also choose between single- or double-leaf doors for sliding doors.

→ For further information, see from page 18.
